Planning- Concept of fish animation established. General Idea to put it in the nav.

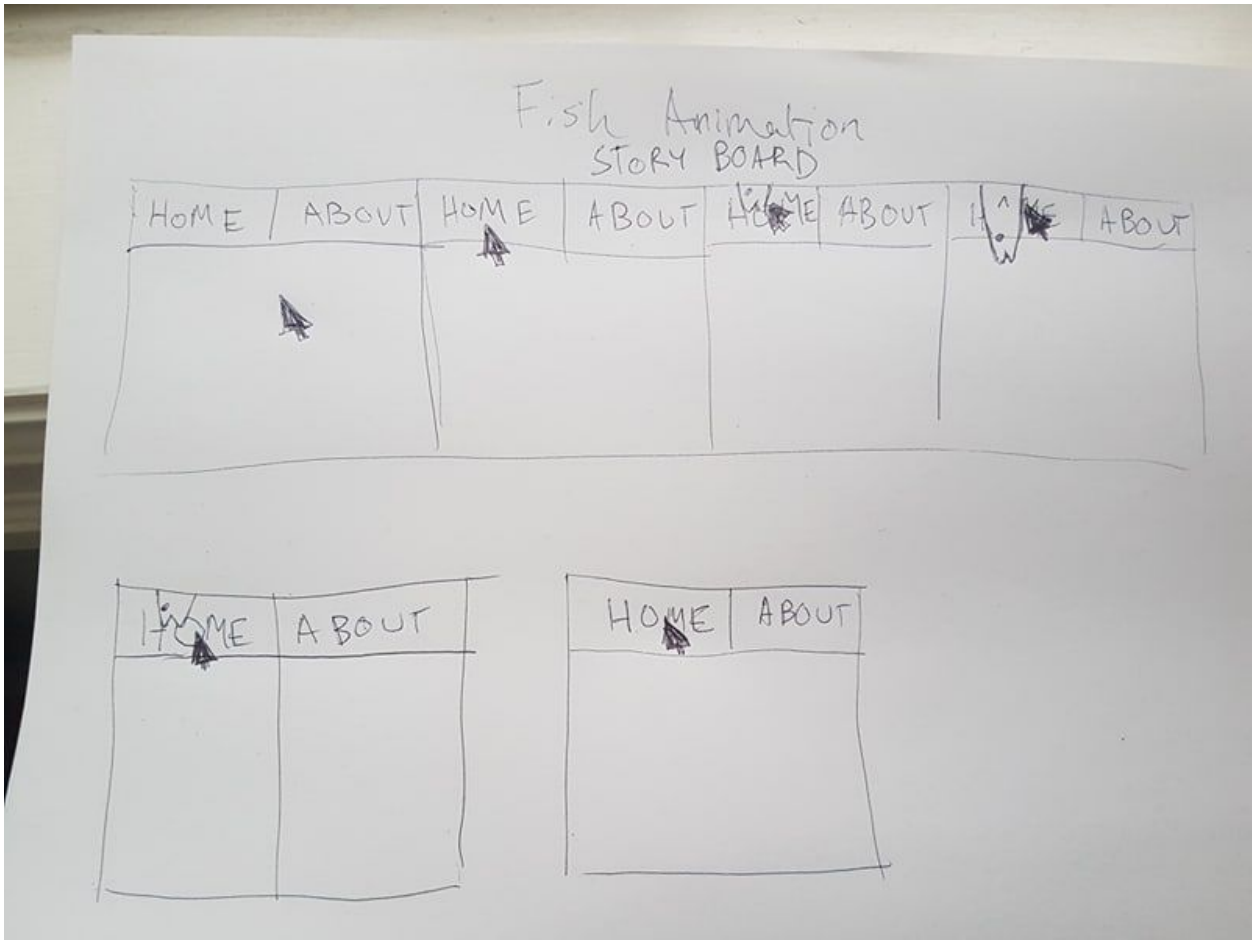
Timeline-Concept first, research done over the course of a week, implemented in a day

Resources- TRAA logo art, Adobe illustrator, Sublime text

Research- https://codepen.io/EvyatarDa/pen/waKXMd has many nav animations and helps you learn how to implement your own.
https://developer.mozilla.org/en-US/docs/Web/CSS/CSS_Animations/Using_CSS_animations explains very well how to create animations in css

Story-The fish will start offscreen and pop down when a nav element is hovered over. We will use the fish from the TRAA logo so that it feels unified.

Storyboard-



Production- done in css

Output- the animation can be watched through our html pages
